### QUESTION 2

- F. The same table name can be used in different schemas in the same database.

**Correct Answer:** EF

**Section:** (none)

**Explanation**

### QUESTION 3

- B. A column with the UNIQUE constraint can contain NULL values.
- C. A constraint is enforced only for the INSERT operation on a table.

### QUESTION 5

Evaluate the following CREATE TABLE commands:

```
CREATE TABLE orders
(ord_no NUMBER(2) CONSTRAINT ord_pk PRIMARY KEY,
ord_date DATE,
cust_id NUMBER(4));
CREATE TABLE ord_items
(ord_no NUMBER(2),
item_no NUMBER(3),
qty NUMBER(3) CHECK (qty BETWEEN 100 AND 200),
expiry_date date CHECK (expiry_date > SYSDATE),
CONSTRAINT it_pk PRIMARY KEY (ord_no,item_no),
CONSTRAINT ord_fk FOREIGN KEY(ord_no) REFERENCES orders(ord_no));
```

The above command fails when executed. What could be the reason?

- A. SYSDATE cannot be used with the CHECK constraint.
- B. The BETWEEN clause cannot be used for the CHECK constraint.
- C. The CHECK constraint cannot be placed on columns having the DATE data type.
- D. ORD\_NO and ITEM\_NO cannot be used as a composite primary key because ORD\_NO is also the FOREIGN KEY.

**Correct Answer: A**

#### QUESTION 6

Evaluate the following SQL commands:

```
SQL>CREATE SEQUENCE ord_seq
INCREMENT BY 10
START WITH 120
MAXVALUE 9999
NOCYCLE;
```

```
SQL>CREATE TABLE ord_items
(ord_no NUMBER(4)DEFAULT ord_seq.NEXTVAL NOT NULL,
item_no NUMBER(3),
qty NUMBER(3) CHECK (qty BETWEEN 100 AND 200),
expiry_date date CHECK (expiry_date > SYSDATE),
CONSTRAINT it_pk PRIMARY KEY (ord_no,item_no),
CONSTRAINT ord_fk FOREIGN KEY(ord_no) REFERENCES orders(ord_no));
```

The command to create a table fails. Identify the reason for the SQL statement failure? (Choose all that apply.)

- A. You cannot use SYSDATE in the condition of a CHECK constraint.
- B. You cannot use the BETWEEN clause in the condition of a CHECK constraint.
- C. You cannot use the NEXTVAL sequence value as a DEFAULT value for a column.
- D. You cannot use ORD\_NO and ITEM\_NO columns as a composite primary key because ORD\_NO is also the FOREIGN KEY.

#### QUESTION 7

Examine the structure and data in the PRICE\_LIST table:

name Null Type

-----  
PROD\_ID NOT NULL NUMBER(3)

### QUESTION 26

View the Exhibit and examine the structure of the PROMOTIONS, SALES, and CUSTOMER tables.

You need to generate a report showing the promo name along with the customer name for all products that were sold during their promo campaign and before 30th October 2007.

You issue the following query:

```
SQL> SELECT promo_name,cust_name
FROM promotions p JOIN sales s
ON(time_id BETWEEN promo_begin_date AND promo_end_date) JOIN customer c
ON (s.cust_id = c.cust_id) AND time_id < '30-oct-2007';
```

Which statement is true regarding the above query?

| PROMOTIONS       |          |              |
|------------------|----------|--------------|
| Name             | Null?    | Type         |

**PROJ\_TASK\_DETAILS**

| TASK_ID | BASED_ON | TASK_IN_CHARGE | TASK_START_DATE | TASK_END_DATE |
|---------|----------|----------------|-----------------|---------------|
| P01     |          | KING           | 10-SEP-07       | 12-SEP-07     |
| P02     | P01      | KOCHAR         | 13-SEP-07       | 14-SEP-07     |
| P03     |          | GREEN          | 14-SEP-07       | 18-SEP-07     |
| P04     | P03      | SCOTT          | 19-SEP-07       | 20-SEP-07     |

The PROJ\_TASK\_DETAILS table stores information about tasks involved in a project and the relation between them.

The BASED\_ON column indicates dependencies between tasks. Some tasks do not depend on the completion of any other tasks.

You need to generate a report showing all task IDs, the corresponding task ID they are dependent on, and the name of the employee in charge of the task it depends on.

Which query would give the required result?

- A. SELECT p.task\_id, p.based\_on, d.task\_in\_charge  
FROM proj\_task\_details p JOIN proj\_task\_details d  
ON (p.based\_on = d.task\_id);
- B. SELECT p.task\_id, p.based\_on, d.task\_in\_charge

The PROJ\_TASK\_DETAILS table stores information about tasks involved in a project and the relation between them.

The BASED\_ON column indicates dependencies between tasks. Some tasks do not depend on the completion of any other tasks.

You need to generate a report showing all task IDs, the corresponding task ID they are dependent on, and the name of the employee in charge of the task it depends on.

Which query would give the required result?
